Rolling shutters
and Rolling doors

saxun[•]

Your world, our universe.

An almost infinite universe of possibilities

At Saxun we have a clear purpose:
to contribute to people's well-being
and happiness by rolling out solutions
aimed at improving their living spaces.

We have been improving living spaces for more than 60 years

Saxun offers you the widest range of cladding, sun protection and furnishing systems on the market to improve your living spaces, adapted to your needs and style, so that you can feel safe and protected.

We design, manufacture and market compact and rolling shutters, mosquito screens, window and door shutters and louvers, garage and commercial doors, folding doors and ceilings, automatic glass doors, glass curtains, curtains and blinds, PVC Alicantina shutters and curtains... An extensive catalogue born from initiative and concern.

Therefore, we are not exaggerating when we say that we have a universe of solutions to lay at your feet, to turn your home or your business into your favourite space.

We adapt to the changing times through our commitment, investment and innovation to achieve continuous improvement in the production and management processes, maximising the knowledge of our professionals so that they can provide you with the best advice and always find the best solution.

A unique approach to innovation

Becoming a large company is much easier when customer and user satisfaction is placed as the fundamental objective of the whole process of hard work, taking great care from the moment an order is placed until it is delivered to the customer.

The creation of R&D+A

Because of this, our R+D+i department has taken its work philosophy to a new level: that of R+D+A. "A" for Application. Because we understand innovation as the ability to develop cutting-edge applications that improve our users' quality of life.

Supporting the professional in every step of the project

Our specialised team, formed of architects, engineers and construction professionals, is always available to help, working shoulder to shoulder with the commercial department and with our clients to advise on doubts that could arise during any installation.

Choosing the best option on a technical and aesthetic level, or identifying the concrete requirements of a space, will be much simpler for our clients, thanks to being able to count on assistance of the highest calibre.

So, we ensure that our sun protection system installations for buildings not only reach any location, but also become optimally integrated into any type of project.

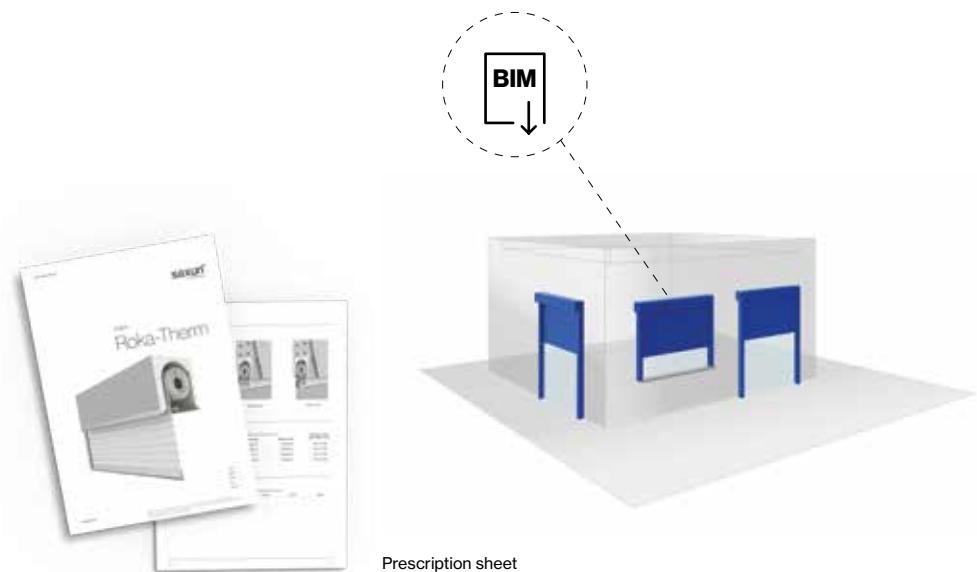

Saxun **BIM**

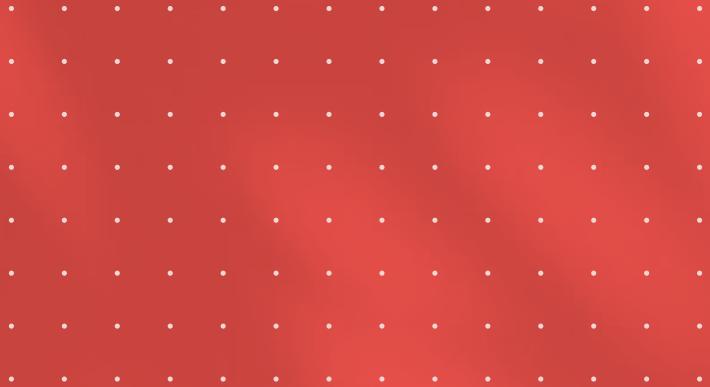

Satisfying clients goes beyond offering the best products with the market leader's guarantee. Full satisfaction is reached when solutions are provided that make a project easier for those working on it.

The most popular products are constantly available on our website in BIM format, ready to be implemented in project plans. This aspect allows professionals to integrate our products into a model of the building, to better understand the opportunities presented by the product and its components during the project phase.

Rolling shutters and Rolling doors

The choice of a good blind is essential for any type of building, whether new construction or renovation. Thus, Saxun's extensive experience in the manufacture of rolling shutters, allows us to offer a comprehensive catalogue to help meet all types of needs.

Windows are the most thermally sensitive point in any type of building. It is the place most prone to the entry of the cold in winter and the heat in summer. Therefore, it is the place where the most energy is wasted.

A complete range consisting of profiled aluminium, extruded aluminium and PVC slats with optimum performance, aesthetics and mechanics, as well as a great variety of boxes, with which to lessen energy wastage and offer solar protection.

A new concept of comfort and safety

At Saxun we understand that homes are meant to be safe places for ourselves and the things we value most. That's why all our rolling doors are manufactured to protect entrances, with one single aim: the resident's peace of mind.

The quality of the aluminium guarantees maximum resistance to any external factor, whether human or environmental. To add to that, by introducing systems that enhance protection against possible break-in attempts, we've made our doors a top choice among architects and construction professionals.

Automated

Product test

Saxun R+D+i department is constantly working on developing new products to meet the strictest requirements on the current window system market. They are focused on the requirements needed by the client, especially for architects on projects where energetic savings, sustainability and insulation concepts are of the utmost importance.

The result of this arduous work is the wide range of profiled aluminium, extruded and PVC slat models.

In addition to the functionality provided by this material is the aesthetic for façades, thanks to the RAL colour range available, which makes for finishes that match the different components of the blinds.

The process to attain a quality product at Saxun doesn't stop here. At the Sax central's facilities, the R+D+i team has the instruments necessary to study the behaviour of each one of the models manufactured under atmospheric phenomena and their life cycle.

CE Mark

Saxun obtains and maintains the necessary conformity for their slats with the essential requirements established by the European Union.

With a company policy that guarantees a quality product, Saxun has the technical documentation necessary to verify that the products meet with the corresponding CE marking. Information is also supplied that bears witness to the specified construction characteristics and guarantees that the values stated from the initial test are maintained.

What is more, the product comes with its respective identifying, exclusive label. The foam filled roll formed aluminium slats and PVC slats were developed and manufactured according to the chapters in EN-13659.

On the other hand, extruded aluminium safety doors and slats were developed and manufactured according to the chapters in EN-13241-1.

Additionally, the development and manufacture of these products are aligned, given that they fulfil the European Construction

Product Regulation Nº 305/2011, as well as the scope of application of the activation system that they have, such as motorisation and automations according to Guidelines: 2014/30/UE regarding Electromagnetic compatibility, 2014/35/UE regarding Low voltage and 2014/53/UE Radio electric equipment and telecommunication End slat equipment.

Environmental policy

Saxun is a company that provides solutions for solar protection systems, whose purpose is to promote wellbeing and energetic savings for those who benefit from our products.

This is why sustainability and energetic efficiency have such a fundamental role in the idiosyncrasy of our productive processes. We apply a strict environmental policy, in line with the company's social responsibility policy.

We use sustainable, totally reusable materials, such as aluminium, which is used in practically all of our products. This metal can be absolutely recycled, its properties and services kept intact. The extrusion plant is also equipped with purification stations that minimise the impact of waste waters in the lacquer and anodising processes.

Another greatly important material in our products is PVC, where the raw materials used are of the highest quality. Of note is the fact that they are totally lead-free as a stabilising agent. The PVC extrusion plant has excellent filtration, which along with the reduced handling of chemical products, makes for a clean environment that guarantees a totally healthy setting for users.

Rolling shutter Mini-40 PVC

Shutters, performance requirements including safety.

EN 13659

Tests

According to EN 1932

«Resistance to wind loads, method of testing and performance criteria».

According to ISO 52022

«Solar protection devices combined with glazing - Calculation of solar and light transmittance - Part 1: Simplified method».

According to EN 13125

«Shutters and blinds - Additional thermal resistance - Allocation of a class of air permeability to a product».

Classification

According to EN 13659

«Shutters, performance requirements including safety».

Wind resistance of a shutter is characterized by its capacity to resist specific loads that simulate the action of wind pressure and depression.

Wind resistance is specified within the classes defined by threshold values of the following pressures:

$$\text{Wind force (Pa)} = \frac{1}{2} \times r \times v^2$$

1 Pa = 1 N/m²

r = density air = 1.225 kg/m³

v = speed air m/s

1 m/s = 3.6 km/h

“p” Nominal pressure

Represents wind pressure applied to the blind by which it must not be deformed or damaged which may affect the correct function.

“1,5 p” Safety pressure

Represents wind pressure applied to the blind by which no damage will be observed that may be dangerous for the people: break, displacement of devices, locking or blocking.

Wind resistance classes

Wind resistance blinds are evaluated by applying an even distributed load on the whole enclosure, thus representing wind pressure:

Class

	0	1	2	3	4	5	6
Nominal pressure test (Pa) ó (N/m ²)	<50	50	70	100	170	270	400
Safety pressure 1.5 p (Pa) ó (N/m ²)	<75	75	100	150	250	400	600
Pressure safety speed 1.5 p (Km/h)	<393	≈ 39,8	≈ 46	≈ 56	≈ 73	≈ 92	≈ 112

Parameters of situation

Location

Depending on the height at which our blind is located:
Being from 0-6 m, 6 m to 18 m, 18 m to 28 m, 28 m to 50 m and 50 m to 100 m above ground.

Land

1. Seaside, lakes traveled by the wind over a distance of at least 5 km, flat countryside unhindered.
2. Countryside with hedges, small farms, houses and occasional trees.
3. Suburban industrial areas and permanent forests.
4. Urban areas in which buildings occupy at least 15% of the area and have an average height greater than 15 m.

Industrial, commercial and garage doors and gates.

EN 13241-1

Tests

According to NORMA EN 12444:2000

«*Industrial, commercial and garage doors and gates. Resistance to wind load. Testing and calculation.*».

According to NORMA EN 12604:2000

«*Industrial, commercial and garage doors and gates. Mechanical aspects. Test methods.*».

According to NORMA EN 12453:2000

«*Industrial, commercial and garage doors and gates. Safety in use of power operated doors. Test methods.*».

Safety factors for wind loads

Safety factors to consider in the design of the doors with respect to their resistance to wind load.

The table shows, for each type of design outlined in EN 12424, charges related test, the fracture limit loads (applicable only to tests) and design loads.

Definition of terms

The terms are understood as follows:

Design Load

Rating values of reference for wind load as stated in the table.

Test Load

Applied load when tested without permanent deformation and is equal to a load x factor of 1.1.

Breaking Load Limit

Load to be applied when tested with permanent deformation but the door remains in place and that equals a rated load x factor of 1.1 x 1.25.

Load Calculation

Load to be considered for the calculation based on the stress and equals rated load x factor of 1.5.

Wind resistance classes

Wind resistance blinds are evaluated by applying an even distributed load on the whole enclosure, thus representing wind pressure:

Class

	1	2	3	4	5
Load design (Pa)	≤ 300	≤ 450	≤ 700	≤ 1,000	> 1,000
Load test (Pa)	330	495	770	1.100	design load x 1.1
Load calculation (Pa)	450	675	1.050	1.500	design load x 1.5
Breaking load limit (Pa)	≥ 415	≥ 620	≥ 965	≥ 1.375	design load x 1.25
Wind speed limit load break (km/h)	≈ 93.7	≈ 114.5	≈ 142.9	≈ 170.6	> 170.6

Reaction to fire tests

Tests

According to EN-ISO 11925-2

«*Ignitability of building products subjected to direct impingement of flame.
Part 2: Single-flame source test».*

According to EN-ISO 13823

«*Ignitability of building products subjected to direct impingement of flame. Part 2:
Single-flame source test».*

Definition

This classification was carried out according to the procedures given in the standard:

EN 13501-1

Fire classification of construction products and building elements».

Part 1: Classification using data from reaction to fire tests.

Definition of the classification

Class A

Non-Combustible Product.

Class A1

No permitted inflammation and must meet the criteria for mass loss and increased temperature. It must also meet the criteria for Higher Calorific Power.

Class A2

Allows an inflammation ≤ 20 sec. and must meet the criteria for mass loss and increased temperature. It must also meet the criteria for Higher Calorific Power.

Class B

High limited contribution to fire.
Combustible.

Fall of drops

The observation of falling material or inflamed in the first 10 minutes of test particles allow the identification attributed to the material subscript «d», in the following way.

d0 No drop of inflamed material is observed.

d1 Drop of inflamed material with a persistent flame ≤ 10 seconds.

d2 Drop of inflamed material with a persistent flame > 10 seconds.

Testing profiled aluminium slats with injected polyurethane.

Additional expressions

Class C

Limited contribution to fire.
Combustible.

Class D

Average contribution to fire.
Combustible.

Class E

High contribution to fire.
Combustible.

Class F

No performance determined.
Unclassified.

Regarding smoke emission:

Refers to the emission of fumes produced by the sample (opacity), calculating the amount and speed, depending on the values obtained have limits for the possible classification.

s1 Would correspond to a sample which produces low smoke.

s2 Would correspond to a sample which produces an average emission of smoke.

s3 For products with high emission of smoke, when they don't meet the criteria for s1 and s2.

Slats without light slits

Alugix-39.5, Alugix-42, E-45, Alugix-45, Alugan-45, Alugix-50, Alugix-55, Alugix-546, Alugix-56 and PS-78.

Classification of Reaction of Fire
Alugix-39.5 and PS-78

Rolling door test laboratory

Saxun has a sophisticated technological center where all the trials and tests are carried out to certify the guarantee of any of the systems manufactured.

Aluminium and powder coated

The aluminium slats produced and manufactured by Saxun have an advanced design to comply with the strictest quality controls. Manufacturing is carried out with the most demanding raw materials and finishes on the market using the latest technologies.

Polyurethane foam density

According to the analysis carried out in the laboratories of the company Elastogram S.A. established in the town of Rubí and samples of our slats made with rigid polyurethane foam BASF, we have obtained the following results:

Density according

UNE EN ISO 845 de 75-250 kg/m³

Dimensional stability according

EN 1604 a 80°C ± 0.5 %

Dimensional stability according

EN 1604 a -20°C

These results were obtained after subjecting samples slat at temperatures of 80 °C and 20 °C for 24 hours.

BASF foam fully fills the cavity of the blade providing a high mechanical strength, torsional strength and also a certain thermoacoustic properties.

Furthermore, the foam is waterproof, resistant to aging and biochemically inert against molds.

Aluminium band

The aluminium strip used for making **Alugix-39.5, Alugix-42, E-45, Alugix-45, Alugan-45, Alugix-50, Alugix-55, Alugix-546, Alugix-56 and PS-78**, model corresponding to the 3005, temple H 46.

Metallic support

Alloys

EN AW-3005 (AL Mn1 Mg0,5) de HYDRO - According to EN 573-3.

100 - 300	- 0/+0.3

Lacado

Pretreatment

- a) Stretching
- b) Alkalic degreasing
- c) Chromated Cr⁶⁺

Powder coated

- a) Top side coated with PUR/PA thickness of coating depends on colour and gloss ca. 22 µm
- b) Reverse side protective coated, foamable with PUR

Properties of powder coated

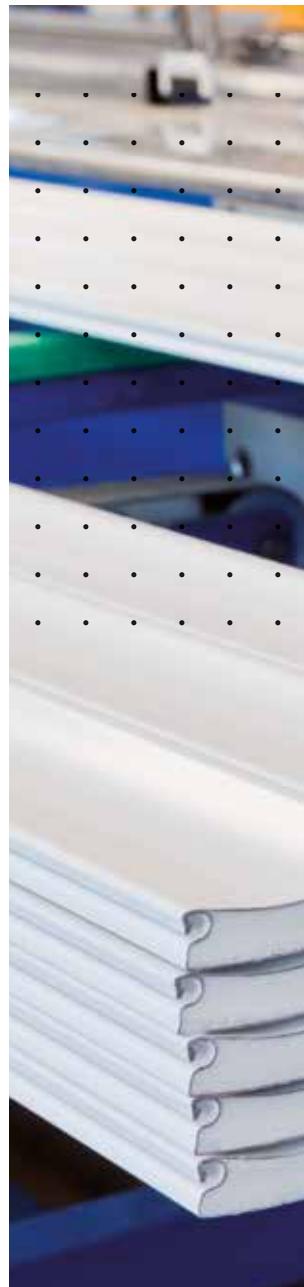

Bending **EN 13523-7** T 0.5 no loss of adhesion after tape test T 1 no cracks.

Cupping print **EN 13523-6** No loss of coating after tape test up to cracks on metal.

*Salt spray test after 500 and 1,000 hours **EN 13523-8** No blistering or loss of adhesion on even, untreated areas max. 3 mm Infiltration at the edges and max. 2 mm an the cut.

Water storage **EN 13523-9** No blistering and no loss of adhesion after 1,000 hours.

Resistance to abrasion - < 30 mg of abrasion after 1,000 revolutions to 2 x 500 g the weight of the film Roll type CS 10.

Cleaning and maintenance

In order to prevent rusting, we recommend periodically cleaning the materials with water and neutral soap.

The minimum frequency is once per year, or more often for materials exposed to aggressive environments (ocean, industrial, presence of suspended dust, etc.).

It is important to rinse with plenty of water after using detergents to prevent salt formation on the slats' surface.

This periodic cleaning, appropriately carried out, eliminates exogenous agents on the slat's surface that

may attack the covering and the aluminium, lengthening the life span of the blind and its aesthetic elements.

**The aluminium band used to manufacture our profiled slats has the highest antirust properties.*

Saxun certifies that its products are manufactured by following a strict internal quality control, and that all of the materials used in manufacture are subject to AENOR – ISO standards.

Extruded aluminium

The aluminium profiles that we use in our factories are extruded with 6060/6063 alloys and a T5 Temper, and their finishes are produced following the specifications of the Qualicoat, Qualideco and Qualanod quality brands.

These alloys and their tempering are suitable for the entire range of profile products for construction and metalwork, as well as architectural and structural applications for general use where a decorative application is sought.

Extrusion process

To perform extrusion, the aluminium is supplied in cylindrical ingots, which are also known as "billets". The extrusion process involves applying heat and pressure to the aluminium cylinder (or "billet") by passing it through a mould (or "matrix"), to achieve the desired shape. Each type of profile has a suitable "mould", known as its matrix, which determines its shape.

Once the aluminium has been extruded, ageing and tempering processes are applied to achieve the properties prescribed for each application.

Cylindrical ingots also called "billets", to obtain straight aluminium profiles and eliminate any tension in the material, they are stretched. They are then cut into suitable lengths and artificially aged to achieve the appropriate strength.

Aluminium treatments and finishes

The aluminium is marketed with a wide variety of finishes and options, with some of the most prominent listed below.

Anodised

The aluminium forms a thin film of aluminium oxide on its surface after being extruded, to protect itself from the action of atmospheric agents; this has a more or less regular thickness of around 0.01 microns and grants it very slight antioxidation and anticorrosion properties.

There is an electrolytic chemical process known as anodising that allows us to artificially obtain oxide films that are much thicker and offer better protection than naturally-formed layers.

Depending on the desired layer thickness, there are **two anodising processes**:

- Decorative, coloured anodising.
- Surface-strengthening anodising.

The advantages of anodising are:

- An anodised outer layer is more durable than one obtained via painting.
- An anodised layer cannot peel, as it is part of the metal itself.
- Anodising gives aluminium highly variable, decorative looks by allowing it to be coloured in whatever shades you wish.
- Sunlight doesn't affect anodised layers and as such, cannot damage them.

Lacquer

Lacquer, which is applied to aluminium profiles, consists of a powdered paint applied to the aluminium surface via an electrostatic process. The most popular paints for such applications are polyester-based, due to their high resistance to light and corrosion.

There is an infinite variety of colour and textures.

PVC

PVC is the result of the polymerisation of vinyl chloride monomer to polyvinyl chloride.

It is the most versatile plastic derivative and can be produced via four different processes: suspension, emulsion, mass and solution.

It can be characterised as ductile and strong; it offers dimensional stability and environmental resistance, and furthermore is recyclable by various methods.

- It has a high resistance to abrasion, along with a low density, good mechanical strength and impact, meaning it is ideal (and commonly used) for construction.
- It has a high resistance to abrasion, along with a low density, good mechanical strength and impact, meaning it is ideal (and commonly used) for construction.
- Highly resistant and durable.
- Because of the chlorine atoms that make up PVC polymer, it does not catch fire easily or burn independently, and stops burning once the heat source is removed. PVC profiles are used in construction for coatings, ceilings, doors and windows, due to their low flammability.
- An excellent thermal and electrical insulator.
- A wide range of hardnesses.
- It is highly resistant to corrosion.

Regulation applied to the manufacture of PVC slats

EN 53141 Characteristics of non plasticised polyvinyl chloride (PVC-U) profiles for rolling shutter slats.

This standard applies to all rolling shutter slats, blinds and doors, whatever their design, made by PVC-U extrusion, which are normally used in construction.

All our PVC slats are manufactured in compliance with the minimum requirements that must be met by non plasticised polyvinyl chloride (PVC-U) profiles for the manufacture of rolling shutter slats, as well as some of the internal tests and methods used to determine such characteristics.

PVC slat tests

Determination of appearance and **UNE colour 53141**.

Determination of **UNE 53141**.

Determination of weight per **UNE unit of length: 53141**.

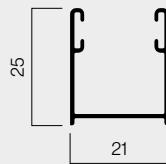

Determination of resistance to **UNE coupling 53141**.

Determination of thermal shrinkage **EN 479**.

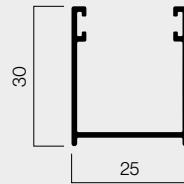

Determination of impact properties via Charpy tests **EN ISO 179-1**.

Determination of resistance to aging in artificial weather **EN 513**.

Foam filled roll formed aluminium slats

Today, energetic efficiency has become a priority at people's homes.

To this end, Profiled aluminium slats guarantee total control over solar light, and great thermal insulation thanks to their technical characteristics.

Additionally, the polyurethane foam inside makes the material robust and resistant to atmospheric phenomena.

Diversity in models aids in the appropriate selection for each window frame, thereby adjusting to the dwelling's finishes.

Blind or punched slats, along with the broad RAL colour selection, help to achieve the desired finish.

Alugix-39.5

015039 Alugix-39.5

Technical characteristics

Area of covering	39.25 mm
Number slats by meter	25.47 units
Maximum recommended width	3,050 mm
Slat weight (density 75 kg/m ³)	2.05 kg/m²
Slat weight (high density 250 kg/m ³)	3.15 kg/m²
Packaging unit standard	60 slats
Production lengths	de 5.50 a 6.50 ml
Minimum rolling diameter	42 mm

End slats compatibility

A - Interior • B - Blind • N • C - Exterior • D - 2 Sides
Intermediate • AC

Fire reaction

EN 13501-1

Without light slits - Class B-s2, d0
With light slits - Class C-s2, d0

Set of cap compatibility

Set of cap Alugix-39.5 S (code 015069)

Extruded aluminium slats

Saxun offers a broad catalogue of rolling doors and blinds that are an ideal solution, both for residential use in single family dwellings or chalets and for garages and industrial warehouses.

In order to guarantee safety and comfort, all of our systems have modern automation systems that bring innovation and design together, in addition to easy installation.

A wide variety of models with different sizes and services have a high level of resistance, safety and aesthetics. Our slats may be perforated, microperforated, etc., and may all be combined together.

All rolling doors offered by Saxun are available with a wide range of finishes in the entire RAL colour range, exclusively anodised and lacquered with wood.

Class 5: 400 Pa ≈ 92 km/h

Class 6: 600 Pa ≈ 112 km/h

EN 13241

Minimum required (CE)

Class 1: ≥ 415 Pa ≈ 94 km/h

Class 2: ≥ 620 Pa ≈ 115 km/h

Class 3: ≥ 965 Pa ≈ 143 km/h

Class 4: ≥ 1.375 Pa ≈ 171 km/h

Class 5: c.d. x 1.25 ≈ 171 km/h

PS-100 Flat

033273 PS-100 Flat Blind
033275 PS-100 Flat Perforated
033274 PS-100 Flat Microperforated

Technical characteristics

Area of covering	100 mm
*Free ventilation area of perforated	39.20 %
*Free ventilation area of microperforated	16.00 %
Number slats by meter	10 units
Maximum recommended width (EN 13659)	6,000 mm
Maximum recommended width (EN 13241)	4,200 mm
Slat weight	8.35 kg/m²
Packaging unit standard	5 slats
Stock lengths	5.80 m / 7 m
Minimum rolling diameter	130 mm
Opening size, perforated slat	55x175 mm

*Aproximate value of the total overall door spaces excluding end slat.

End slats compatibility

03

PVC slats

Our PVC model design is studied to meet current requirements. With this selection of profiles, we offer the possibility of solving any type of facility where a “roll-up blind” is needed, both technically and aesthetically.

Their articulation and operation makes it easy to adjust solar light entry at will, completely eliminating it, in addition to keeping control over aeration.

Additional thermal resistance

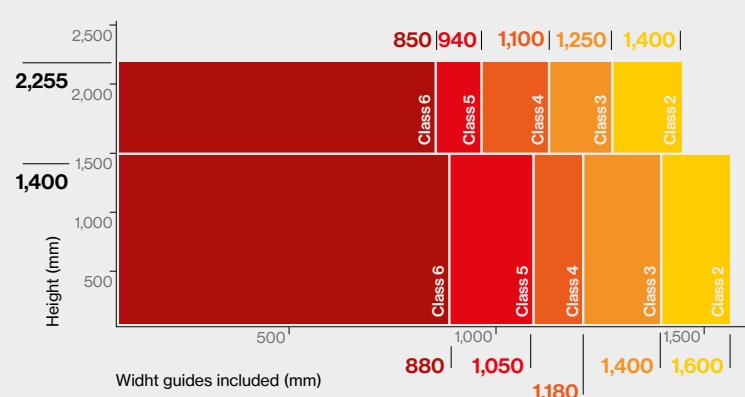

According to EN 13125.

ΔR Class 4 = 0.26 m² K/W

ΔR Class 5 = 0.32 m² K/W

Wind resistance

EN 13659 (Wind resistance for rolling shutters).

EN 13659

Minimum required (CE)

Class 2: 100 Pa ≈ 46 km/h

Class 3: 150 Pa ≈ 56 km/h

Class 4: 250 Pa ≈ 73 km/h

Class 5: 400 Pa ≈ 92 km/h

Class 6: 600 Pa ≈ 112 km/h

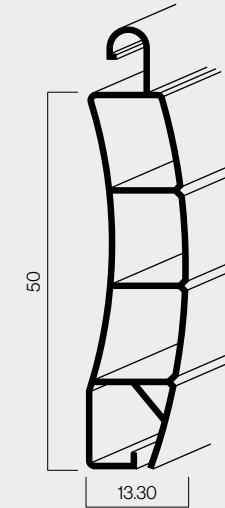

P-50

014017 P-50

Technical characteristics

Area of covering	50 mm
Number slats by meter	20 units
Maximum recommended	2,650 mm
Slat weight	3.22 kg/m²
Packaging unit standard	20 slats
Stock lengths	6 ml
Minimum rolling diameter	60 mm

End slats compatibility

H • Reinforced PVC

Fire reaction

EN 13501-1

Class B-s3, d0

Aluminium guide channels compatibility

UP-40/25 • UP-50/25 • ZF-14 • 19.15x28.40 • V-55
UPS-6.5 • UPS-7.5 • UPS-9.5

Rolling diameter chart

		Height													
		800	1,000	1,200	1,400	1,600	1,800	2,000	2,200	2,400	2,600	2,800	3,000	3,200	3,400
